WOMEN’S ISSUES are COMMUNITY ISSUES

2017 Status Report on Women & Children in Central Texas

Women’s Fund
AUSTIN COMMUNITY FOUNDATION
We believe that when women are economically secure, safe and healthy, then families and communities thrive.

AUSTIN COMMUNITY FOUNDATION

Austin Community Foundation is the catalyst for generosity in Austin — and has been for the past 40 years. We bring together philanthropists, dollars and ideas to create the Austin where we all want to live.

Our approach is to:

/ Inform. We apply data to understand the greatest needs to close the opportunity gap in Central Texas.
/ Invite. We bring funders, leaders and organizations to the table.
/ Invest. We make a collective impact by informing and engaging donors and fundholders and together making philanthropic investments that shape Austin’s future, today.

THE WOMEN’S FUND

The Women’s Fund at Austin Community Foundation was founded in 2004 to focus on the needs of women and children in Central Texas. At the time, there was a lack of philanthropic support targeting the specific needs of women and children and no comprehensive data set tracking their well-being in our community. Since then, Women’s Fund investors have granted over $1.4 million to more than 60 local nonprofit programs, and in 2015, the Women’s Fund issued its first report, Stronger Women, Better Austin: A Status Report on Women & Children in Central Texas.

During this time, there has been a growing awareness that gender matters. Investing in a woman has a proven ripple effect, benefiting not just her family but her greater community. The Women’s Fund is a key strategy in Austin Community Foundation’s effort to close the opportunity gap.

The central question remains: What is life in the Austin area really like for women today?
ABOUT THIS REPORT

Similar to Stronger Women, Better Austin, this report focuses on six indicator areas: basic needs, economic security, education, health, safety and leadership. Additionally, in this report we have sought to:

// Refresh data from the 2015 report and, where helpful, provide comparisons to track progress.

// Expand our previous study to include data and analysis on the well-being of women and children in the entire six county area (Bastrop, Burnet, Caldwell, Hays, Travis and Williamson Counties). The addition of regional and longitudinal data is essential to understanding our changing community.

// Augment data with survey results from the Austin Area Sustainability Project (A²SI) project. Survey questions provide insight to women’s lived experience, such as whether she feels safe walking in her neighborhood at night.

// Provide a deeper dive into key themes and crucial building blocks for women’s economic security: housing, child care, education and teen pregnancy prevention.

METHODOLOGY

This report was developed in collaboration with the RGK Center for Philanthropy and Community Service at the LBJ School of Public Affairs at The University of Texas at Austin. The RGK Center is leading the Austin Area Sustainability Indicators (A²SI) project, a community data initiative that tracks 128 regional indicators of community sustainability. The data in this report is either part of the A²SI Community Survey data that is collected by the RGK Center or publicly available data through the American Community Survey, governmental databases and other trusted research institutes.

SUMMARY OF FINDINGS

In many ways women and children in Central Texas are thriving. As a slight majority of Central Texans, women have a higher educational attainment than men and more than half have completed some college. Women are becoming notable leaders in our community, especially through elected positions. Women entrepreneurs are finding great success, especially in Austin.

However, women continue to be paid less than men in comparable positions, including management roles, and women report feeling limited by their skills or a lack of equal opportunity to get the job they want. Lower wages have life-long implications for women’s economic security, and for single mothers the consequences are profound. One in three families headed by a single mother lives in poverty.

About 25% of Central Texans are children (18 or under). Greatly concerning is the fact that as many as one in four children live in poverty, though this varies depending on the county where a child lives. Children’s safety also varies by county with the highest rates of child abuse in rural counties that often lack support services for struggling families.

Suburban family poverty is increasing by as much as 13%, presumably due to the high cost of living in Austin. Another stressor for families is child care access and cost, and even working families who qualify for child care assistance cannot get it due to lack of funding. Notably, the cycle of poverty is not a cliché. A child’s academic success, including high school graduation and college completion, is strongly correlated with a family’s income.

Overall, women either appear to be doing well against some challenging odds or struggling with little support, especially in the suburbs and rural areas where there is less established infrastructure, including affordable child care, affordable healthcare, public transportation and job training. Without a doubt, Austin as the hub of economic growth in Central Texas must look after its neighbors who work hard to support its success.

The Women’s Fund believes that ensuring the economic security of women in Central Texas is key to alleviating poverty across our community. As this report illustrates, there is indeed work to be done.
Getting to know Central Texas

WHO ARE CENTRAL TEXAS WOMEN?¹
/ Just over half of Central Texans are women.
/ More than half of Central Texas women have a bachelor’s degree or higher.
/ Nearly 60% of women work in the paid labor force.²

WHO ARE CENTRAL TEXAS CHILDREN?³
/ About 25% of Central Texans are children (18 or under).
/ One in five children live in poverty in the Austin area.
/ In Burnet and Caldwell Counties this number is closer to one in four children in poverty.

WHO ARE CENTRAL TEXAS FAMILIES?⁴
/ More than 40% of households in Williamson County include at least one child, yet in Travis County just over 30% of households include a child.
/ While the majority of households with children are headed by married-couple families, the number of single-headed households with children has increased from 27% in 2010 to 40% in 2014.
/ Of households with children in Travis County, 20% (1 in 5) are headed by a single woman.

1 in 5 children live in poverty in the Austin area
WHAT IS POVERTY?

Poverty statistics are often used as a proxy measure to describe the number of people or share of the population that, because of income level, may face challenges meeting their basic needs. Poverty thresholds are updated annually by the U.S. Census Bureau and used for calculating all official poverty statistics. Households with annual incomes below the thresholds are counted as living in poverty, while households with annual incomes at or above are not considered to be in poverty.

At times, a household’s income will be expressed as a percentage of the poverty threshold. For example, a family with income equal to the poverty threshold can be described as living “at 100% of poverty, and a family with income equal to double the poverty threshold can be described as living “at 200% of poverty.

In Travis County in 2015, about 22.6% of children and 14.5% of adults had household incomes under 100% of the poverty level.

It is estimated that households in the Austin area need incomes of at least double the poverty threshold simply to make ends meet.

Basic Needs

WOMEN AND CHILDREN IN THE AUSTIN AREA ARE DISPROPORTIONATELY LIVING IN POVERTY

Families headed by single mothers are especially challenged with one-third of them living in poverty with their children. While the family poverty rate in our region has remained around 10%, where a family lives is rapidly changing due to lack of affordable housing. Central Texas is seeing one of the fastest increases of people living in poverty in the suburbs in the nation. This shift in population has profound implications for employment, transportation and schools. In addition, services for families in need—whether provided by nonprofits or local government—have not kept up with shifting populations.

- Nearly 40% of Austin-area single mothers and their children live in poverty compared to only 10% of the general population.
- Women make up approximately 38% of the homeless population. Children comprise an estimated 20% of Austinites experiencing homelessness.
- Nearly 2/3 of students in Austin ISD qualify for free or reduced meals due to their family’s extremely low income.
- One in three female-headed households receives supplemental nutrition assistance program (SNAP) benefits.

ANNUAL POVERTY GUIDELINES 2015

<table>
<thead>
<tr>
<th>Persons</th>
<th>Poverty Guidelines</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Person</td>
<td>$11,770</td>
</tr>
<tr>
<td>2 Person</td>
<td>$15,930</td>

Example of family budget: single mom with 2 kids

Annual income needs to be 2.7x bigger than 100% of poverty
Hourly wage needed - $24.85
Necessary Annual Income - $49,704

BASIC EXPENSES:

- Housing: $1,963
- Food: $1,929
- Child Care: $900
- Medical/Insurance: $1,799
- Transportation: $1,359
- Other Necessities: $1,290
- Savings: $10
- Payment on Debt: $10
- Federal Taxes/Credits: $1,293

TOTAL $4,142 per month

*Developed using CPPP’s family budget calculator: familybudgets.org
Economic Security

A stable income to support a basic standard of living now and in the foreseeable future is essential for Central Texas families. Yet with women making on average $9,000/year less than men in comparable jobs, women are more likely to experience financial insecurity.

- The median income for women working full-time is $37,270 and for men is $46,410 across the Austin area.
- In Travis County, the median income for women is $41,919 and for men is $50,103.
- One in four women do not feel there are equal opportunities to get the job they desire, a trend that has persisted since 2006.

Housing

Safe and affordable housing is a foundational necessity for a woman’s economic security. As the Central Texas economy booms, housing costs have soared. 60% of single mother households that rent in Central Texas are housing cost burdened, meaning they spend more than 30% of their monthly income on housing. This means that women are forced to prioritize rent over other necessary expenses such as food, transportation and medical needs. It also means that women are disproportionately the victims of frequent evictions when they are unable to make ends meet and pay rent on time.

- Though the region’s population grew by 10% from 2010 to 2014, housing only grew by 3%, making it difficult and competitive to find housing. Securing housing a family can afford presents an even greater challenge.
- To afford a rental unit without experiencing a housing cost burden, an individual must earn approximately $20/hour. This hourly wage is well above the minimum wage of $7.25/hour. A modest two-bedroom rental is increasingly out of range for Central Texas residents.
- More than 50% of Austin area survey respondents believe the community has a responsibility to make sure housing is more affordable for median income workers.
- Nearly half of residents living in Housing Authority City of Austin (HACA) properties are single moms. 80% of HACA residents are women.
More than 60% of children age 6 and under have all available parents in the labor force. This population has consistently surpassed the available capacity of child care facilities and far surpasses the capacity of accredited facilities.

Child care should cost no more than 10% of a family’s median income. The average yearly tuition—$8,836—for one child in a full-time licensed child care center is well out of reach for many families.

Though the Texas Workforce Commission provides child care assistance to parents that work, attend school, or participate in job training, only half of child care providers in Travis County accept these subsidies.

More than 10,000 low income children in Travis County do not have access to a subsidized child care spot.
More than half of Austin-area women have completed some college.\textsuperscript{26}

Despite enrolling in and completing college at higher rates than male peers, women struggle to pay off student debt.\textsuperscript{27}

One in three women in the Austin area feel limited by current skill level or education in the kind of job they’d like to have.\textsuperscript{28}

Despite outpacing their male peers in degree completion, women consistently have a higher rate of poverty across each level of educational attainment.\textsuperscript{29}

When looking at rates of degree completion over time, a “leaky pipeline” shows that girls and women face many obstacles to persisting through the educational spectrum.\textsuperscript{30}

TEEN PREGNANCY PREVENTION
A VITAL STRATEGY TO ENSURE FUTURE SUCCESS

Central Texas continues to see high rates of teen pregnancy, which leaves young women less likely to finish school and much more likely to raise their children in poverty. Reducing high teen pregnancy rates in our community has the potential to reduce high school dropout rates, improve college competition, boost tax contributions through higher earnings and improve the economy.35

/ Teen birth rates in Travis County vary drastically by race/ethnicity (births per 1,000 females ages 15-19).36
  » White, Non-Hispanic – 8.8
  » Black, Non-Hispanic – 34.9
  » Hispanic – 61.6
  » Other – 6.8
/ Adolescents who identify as Hispanic account for 77% of all teen births.37
/ One in five babies born to female teens under 19, were born to teens that were already moms.38

TEEN BIRTH RATES (births per 1,000 females ages 15-19).39

Health

Health is essential to a woman’s economic security. Without access to preventive care, education about healthy living, and affordable health insurance, families living at or near poverty find themselves one health crisis away from financial ruin.

/ 1 in 10 women are uninsured,33
/ 1 in 10 children are uninsured.34

/ Teen birth rates in Travis County vary drastically by race/ethnicity (births per 1,000 females ages 15-19).36
  » White, Non-Hispanic – 8.8
  » Black, Non-Hispanic – 34.9
  » Hispanic – 61.6
  » Other – 6.8
/ Adolescents who identify as Hispanic account for 77% of all teen births.37
/ One in five babies born to female teens under 19, were born to teens that were already moms.38

TEEN BIRTH RATES (births per 1,000 females ages 15-19).39
Safety

If women and children do not feel safe at home, it is difficult to expect success at work and school. Far too many women and children in Central Texas live in situations that create fear and instability. Data on public safety is only capable of reporting offenses known to law enforcement. It is well documented that victims of, or witnesses to, a crime, including interpersonal violence, may choose not to report the incident to law enforcement.

One in three women report being afraid to walk at night in their neighborhood.40

In 2015, there were 4,217 confirmed victims of child abuse and neglect in the six-county Austin region. The most rural counties — Burnet, Bastrop, and Caldwell - consistently had the highest rates of reported child abuse.41

Nearly 20% of children in the Austin area removed from abusive environments were previously confirmed as victims, a percentage that’s unchanged from a decade ago.42

Though crime in Austin has decreased over the past 10 years, rape incidents have increased.43

Leadership

Women’s issues are community issues, yet women continue to be underrepresented in positions of power. Without a voice at the table for civic, community and business conversations, policies and decisions will be made that marginalize the needs of women and families. The greatest progress has been made in elected offices, where women in Central Texas have gained significant positions of leadership.

In 2014, Travis County elected its first female county judge.

In 2015, 7 of the 10 city council members in Austin were women. Representing a majority for the first time ever.

In 1996, Travis County elected its first female sheriff.*

The percentage of businesses owned by women has increased over time by 9%, growing from 26% in 1997 to 35% in 2012.44

Austin MSA ranks 5th between the top 10 metro areas in the US for women-owned firms.45

Top 25 Nonprofit CEOs: 5/2546

Top 25 Private Companies: 2/2547

Top 25 Public Companies: 0/2548
